

SOS-L1

The SOS-L1 package is a great starting point in checking the life of your fuel. This basic package is designed to detect any foreign contaminants present in the fuel, from lighter-end to heavier-end petroleum products, to microbial growth and visible water and sediment.

Test includes the following:

Distillation	ASTM D86
Microbial Growth	ASTM D6469
Appearance	ASTM D4176

Distillation temperature is the temperature at which 90% of the fuel can be distilled off. This temperature is directly related to the fuel's volatility, Cetane Index, Density, Flash Point and Viscosity.

Microbial Growth test determines the type and degree of infestation.

Appearance tests for water sediment or any other foreign debris.
