

Cat[®] CS7 Smooth Drum Vibratory Soil Compactor

The Cat[®] CS7 features a smooth drum and is ideally suited for granular soil applications or cohesive soil applications with the use of an optional padfoot shell kit.

Comfortable and Ergonomic Operator Station

- Features adjustable seat with integrated multifunction color LCD display and control console.
- The optional AM/FM radio has USB ports and Bluetooth[®] wireless technology enabled to connect your device and make hands-free calls.
- Low sound levels and vibration for greater operator comfort and productivity.

Safety at the Forefront

- Unobstructed view to the drum allows operator to see compaction path for proper overlap, verifying scraper efficiency, and watching for obstructions.
- A standard rear vision camera enhances visibility for more complete operator control and safety.
- High-visibility 3 inch (76 mm) seat belt makes it easier to visually confirm safe machine operation.
- Optional seat belt alert system allowing for coaching and monitoring of safe operation.

Exceptional Propel System

 Built around a dual pump propel system, two pumps provide separate dedicated flow to drum drive motor and rear axle motor for exceptional gradeability and traction in forward and reverse.

Virtually Maintenance Free

- Maintenance-free hitch bearings do not require greasing.
- Extended maintenance intervals for vibratory system and hydraulic system, providing more uptime and lower maintenance costs.

Powerful Cat C3.6 Engine

• Meets U.S. EPA Tier 4 Final and EU Stage V emissions standards.

Versatile Compaction Technologies

- Optional MicroVibe™ compaction system offers ultra-low vibration ideal for working near high-sensitive areas or structures.
- Accelerometer-based (CMV) measurement technology available to help operator determine when compaction has been completed to specification for greater productivity and uniform compaction quality.

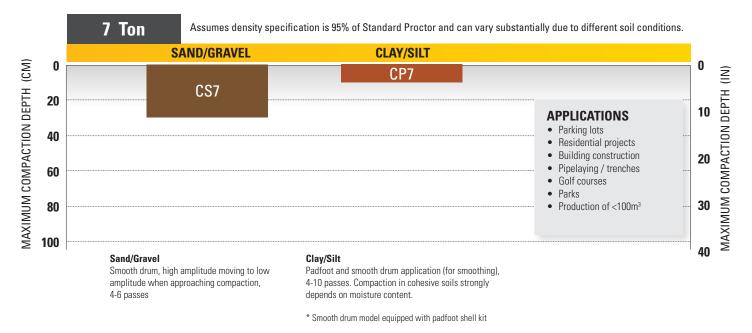

Standard and Optional Equipment

Environmental Declaration

The following information applies to the machine at the time of final manufacture as configured for sale in the regions covered in this document. The content of this declaration is valid as of the date issued; however, content related to machine features and specifications are subject to change without notice. For additional information, please see the machine's Operation and Maintenance Manual.

For more information on sustainability in action and our progress, please visit www.caterpillar.com/en/company/sustainability.html.

ENGINE

- The Cat C3.6 is available in configurations that meet U.S. EPA Tier 4 Final and EU Stage V emissions standards.
- Cat diesel engines are required to use ULSD (ultra-low sulfur diesel fuel with 15 ppm of sulfur or less) or ULSD blended with the following lower-carbon intensity fuels** up to:
 - ✓ 20% biodiesel FAME (fatty acid methyl ester)*
 - ✓ 100% renewable diesel, HVO (hydrotreated vegetable oil) and GTL (gas-to-liquid) fuels

Refer to guidelines for successful application. Please consult your Cat dealer or "Caterpillar Machine Fluids Recommendations" (SEBU6250) for details.

* For use of blends higher than 20% biodiesel, consult your Cat dealer.

** Lower-carbon intensity fuels do not significantly reduce GHGs at the tailpipe.

AIR CONDITIONING SYSTEM

The air conditioning system on this machine contains the fluorinated greenhouse gas refrigerant R134a (Global Warming Potential = 1430). The system contains 0.9 kg (1.98 lb) of refrigerant, which has a CO_2 equivalent of 1.287 metric tonnes (1.418 tons).

PAINT

- Based on best available knowledge, the maxi mum allowable concentration, measured in parts per million (PPM), of the following heavy metals in paint are:
- Barium < 0.01%
- Cadmium < 0.01%
- Chromium < 0.01%
- Lead < 0.01%

SOUND PERFORMANCE

With cooling fan speed at maximum value:

Exterior Sound Power Level (ISO 6395:2008) - 106 dB(A)

With cooling fan speed at 70% of maximum value:

Operator Sound Pressure Level (ISO 6396:2008) - 90 dB(A)

- When properly installed and maintained, the cab offered by Caterpillar, when tested with doors and windows closed according to ANSI/SAE J1166 OCT98, meets OSHA and MSHA requirements for operator sound exposure limits in effect at time of manufacture.
- Hearing protection may be needed when operating with an open operator station and cab (when not properly maintained or doors/windows open) for extended periods or in a noisy environment.

OILS AND FLUIDS

- Caterpillar factory fills with ethylene glycol coolants. Cat Diesel Engine Antifreeze/Coolant (DEAC) and Cat Extended Life Coolant (ELC) can be recycled. Consult your Cat dealer for more information.
- Cat BIO HYDO[™] Advanced is an EU Ecolabel approved biodegradable hydraulic oil.
- Additional fluids are likely to be present, please consult the Operations and Maintenance Manual or the Application and Installation guide for complete fluid recommendations and maintenance intervals.

FEATURES AND TECHNOLOGY

- The following features and technology may contribute to fuel savings and/or carbon reduction. Features may vary. Consult your Cat dealer for details.
- Standard Eco-mode limits engine RPM, lowering overall fuel consumption compared to high idle
- Optional compaction control reduces unnecessary passes, contributing to lower overall fuel consumption
- Auto idle shutdown reduces unproductive hours and fuel burned
- Extended maintenance intervals reduce fluid and filter consumption

RECYCLING

• The materials included in machines are categorized as below with approximate weight percentage. Because of variations of product configurations, the following values in the table may vary.

Material Type	Weight Percentage
Steel	79.76%
Iron	8.64%
Rubber	3.74%
Nonferrous Metal	1.91%
Plastic	1.63%
Other	1.46%
Fluid	1.38%
Uncategorized	0.73%
Mixed-Metal & Nonmetal	0.71%
Mixed Metal	0.04%
Mixed Nonmetallic	0.00%
Total	100%

 A machine with higher recyclability rate will ensure more efficient usage of valuable natural resources and enhance End-of-Life value of the product. According to ISO 16714:2008 (Earthmoving machinery – Recyclability and recoverability – Terminology and calculation method), recyclability rate is defined as percentage by mass (mass fraction in percent) of the new machine potentially able to be recycled, reused or both.

All parts in the bill of material are first evaluated by component type based on a list of components defined by the ISO 16714:2008 and Japan CEMA (Construction Equipment Manufacturers Association) standards. Remaining parts are further evaluated for recyclability based on material type.

Because of variations of product configurations, the following value in the table may vary.

Recyclability - 96%
